A Coordinate geometry: compare matched cells
Matched row identities
Reference X
Candidate Z
Fixed arrays; no retraining
Union kNN graphs
G(X)
G(Z)
Unweighted shortest paths
Report separate diagnostics
R connected-pair survival
E reciprocal edge distance
S far-pair separation
B Native allocations: check meaning before smoothness
Native probability matrix P
Rows sum to one
Known allocation axes
Continuous Z is ineligible
Exact JSD normalization
D(edge) / D(all distinct pairs)
C = clip[1 − ratio, 0, 1]
Fixed reference edges
Apply dispersion guards
Degenerate denominator?
Near-uniform allocation?
Eligible C or guarded status
C Stress tests on the same fixed objects
9 graph settings
5 reassignment fractions
999 null draws
Invariance checks
