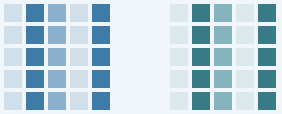
a Coordinate geometry: compare matched cells

Matched row identities



Reference X Candidate Z

Fixed arrays; no retraining

Nearest-neighbour graphs

G(X) G(Z)

Unweighted shortest paths

Report separate diagnostics

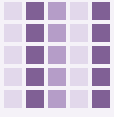
R reachability

E edge survival

S separation survival

b Native allocations: check meaning before smoothness

Native probability matrix P



Rows sum to one

Known allocation axes

Continuous Z is ineligible

Exact Jensen–Shannon ratio

D(edge) / D(all distinct pairs)

C = clip[1 − ratio, 0, 1]

Fixed reference edges

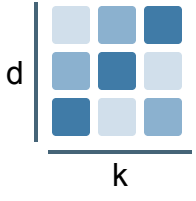
Apply dispersion guards

Degenerate denominator?

Near-uniform allocation?

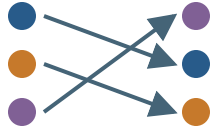
Eligible C or guarded status

c Reference stress tests



Graph scale

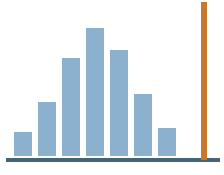
9 settings



Row reassignment

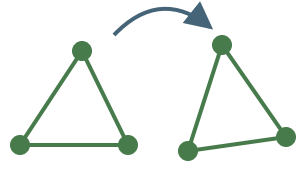
5 fractions

d Null and invariance controls



Permutation null

999 draws



Invariance

Rotate / scale / reorder
