a
Reachability is a candidate statistic
Reachability R
Candidate component pair fraction
Fixture
Scale objects
Real objects
b
A fragmented reference
Score (three seeds)
Faithful
All arms merged
One arm merged
Trunk split
Rows permuted
Reachability R
Pair precision
Component ARI
c
Graded arm separation
Fraction of full response
15-neighbour radius
Arm shift (log scale)
Reachability R
Distance Spearman
Q global
AUC-RNX
d
Full comparator response
Reachability R -0.668
Distance Spearman -0.224
Q global -0.118
AUC-RNX -0.084
Edge survival E* -0.013
Far-vs-edge AUROC -0.013
Trustworthiness -4.7e-04
LCMC -0.006
Cohesiveness -0.132
Steadiness -0.013
Paired change at shift 9
e
Merging disjoint clusters
Score
Merge fraction
Reachability R
Pair precision
Distance Spearman
f
Unshifted faithful candidate
Reachability R (20 seeds)
Neighbours k
n = 450
n = 2,000
